

ABSTRACT OF DISCLOSURE

5       Wearable systems for providing situational  
awareness in battle or combat type conditions. More  
specifically, this invention provides modular,  
wearable, weapon-integrated computer systems for  
gathering and transmitting data, wherein the systems  
10       include non-integrated components and are tailorable  
for specific missions and/or conditions. Further, this  
invention provides unique hardware and software means  
for controlling such systems and for communicating with  
other system wearers.
